

## UNIFY IT AND SECURITY OPERATIONS

With an ever-changing device inventory and a distributed workforce, reducing risk, maintaining compliance, and optimizing uptime are major challenges for IT and Security Operations teams. Siloed toolsets are simply outdated, leaving IT and Operations staff unable to collaborate in the face of increasing threats and compliance requirements.

Syxsense Secure is the leading unified IT management and security solution that combines patch management, security vulnerability scanning, and powerful no-code automation to deliver a complete, cloud-native solution that supports all your security and compliance needs.

With Syxsense Cortex™, your teams can build and deploy complex, automated workflows and enforce corporate policies across enterprise devices with a simple drag-and-drop interface. There's no need for specialist skills. Cortex does the

hard work, so you don't have to. Syxsense Secure comes with full access to our extensive library of pre-built playbooks to get your devices and environment under control quickly.

Windows Linux Mac OS iOS Android

### IMPROVE SECURITY

Prioritize and patch faster with automation to reduce risk in real-time

### OPTIMIZE RESOURCES

Automate security tasks easily with slick, no-code workflow design

### SIMPLIFY COMPLIANCE

Get complete visibility of devices and automate compliance reporting and benchmarking

## SYXSENSE SECURE FEATURES

**Automated Security and Device Management with Syxsense Cortex™ Workflows** Simplify complex IT and security tasks with our no-code, workflow design. Create proactive, automated processes to identify potential risks, then quarantine, patch and integrate devices smoothly.

**Extensive Device Management** Syxsense Manage is cloud native and hosted in Microsoft Azure. Consolidate desktops, laptops, servers, virtual machines, and mobile devices (MDM) using Windows, Mac, Linux, iOS, or Android from a single solution.

**Proactive, Prioritized Patching and Deployment** Always get the most critical updates to the most vulnerable devices with accurate detection and automated, rapid deployment.

**Third-Party Support** Stay on top of security threats and patches for third-party software applications, such as Adobe, Java, Chrome and more. Proactively check for hot fixes, bug-fixes and other software patches issued by the vendor.

**Remote Troubleshooting** Resolve any issue, large or small. Assist remote workers by sharing a desktop securely to quickly identify problems and find solutions in a matter of minutes.

**Customizable Dashboards** Customize and share discoveries and actionable insights with key stakeholders with interactive visualizations of vital security metrics.

**Streamlined Compliance** Address audits with confidence. Easily generate compliance reports for regulatory agency audits, such as HIPAA, PCI, and SOX.
